

PERICO CABALLERO PACHECO

WEB DEVELOPER

PROFILE

My passion is learning new technologies and share it with my colleges when the chance shows up, this brings me great joy.

I am self-taught mainly thanks to enthusiasm. That means I am driven by passion and end goal. On the technical side, my skillset includes HTML5, CSS & SASS, **Javascript-TypeScript**-Nodejs-**Angular-Ionic**, jQuery, Java-Katalon, PHP, JSP and SQL. Skilled with Git version control and NPM package manager.

Accustomed to the use of Bootstrap and **PrimeNG**, the latter made me love Angular way deeper.

I love trying out stuff, then polish it to achieve something that gets me a cool feeling of satisfaction.

Educated and pleasant, although initially somewhat shy. I have my own vehicle and availability (actually preference) to travel.

History

EDUCATION

The British School of Cordoba

Primary, secondary and Baccalaureate studies

Took the scientific-technological branch, with Advanced Mathematics. All the teachers were native English, that strongly reinforced an advanced & very fluent level of English.

Trassierra & Gran Capitán

Degree in Web and Web Applications Development

This gave me a solid base on programming, as well as some main programming languages that allowed me to understand more easily more advanced programs and continue improving. My degree project was an iOS & Android application that is these days being used by new students, to do it, I had to dig in Angular and Ionic, I loved it!

BUSINESS EXPERIENCE

Bosbe – Hybrid Phone Apps Developer

I developed a few phone applications to meet the demands of some customers that initially purchased websites, but I also helped developing those webpages. I had to do a lot of self-learning and to speed up, I purchased a few Udemy courses. Really good courses which (most) I would recommend.

Everis – Automated Testing Developer & Java Developer

Learnt and developed Katalon for "British Car Auctions" project. I loved seeing the enormous utility that contributed to the complex and extensive web application that my colleagues were developing. Months later, when Katalon caught up with development, they moved me to develop Java for the European Medicines Agency, where I was not especially happy due the often lack of workload, but I could practice on a daily basis my English, which was getting bit rusty.

Atos – Frontend Developer with Angular 7, 8 & PrimeNG

Applied and joined as I was promised lots of Angular. At first it was understanding, improving and extending an existing project, but when that ended, I joined a newly made team that would create from scratch an enormous Angular8 application for the Electrical Network of Spain. I'm quite happy with what I'm working with, as I keep on improving and learning Angular which I really like and that will keep on growing and last thanks to the support of both Google and Microsoft.

Languages: Native Spanish, C1 English, A2 French
